High Resolution Linux Based Digital Video Recorder Systems

The Next Generation top of the range DVR PLATINUM SERIES features 400FPS display rate (REAL TIME) which is essential for prolonged periods of video monitoring (as it eliminates headaches and sore eyes). The PLATINUM100L has a 100FPS global recording frame rate and the PLATINUM200L has a 200FPS global recording frame rate. On each machine the user can select to record in either Standard Resolution or High Resolution. Each system has the ability to be remotely viewed from anywhere around the world by simply logging in to the system via your web browser. The included multi-host software allows multiple DVR's to be connected on a network to provide simultaneous viewing and control of up to 256 cameras. The DVR Platinum Series supports an additional 3 hard disk drives allowing for a up to 2.25TB to be utilised.

Platinum Multihost Software - How It Works

This system gives you total control and flexibility, no longer do you have to imagine viewing all your sites at once the Technology is here and its included with the Platinum series

Sample Installation:

Remote Monitoring Site

Site 1 NSW

Site 2 QLD

Site 3 VIC

What Does It Mean?

In the example installation above the client has 3 sites located throughout Australia, using standard non multihost systems would only allow the remote monitoring site to be able to view one location at a time, however by using the Platinum series DVR's with the included Multihost Software you are able to view and control any combination of cameras and sites from anywhere around the world simultaneously. In the example the client has chosen 13 cameras from the NSW site, 11 from the Qld site and 15 from the VIC site, meaning all 39 cameras are displayed at once on the remote viewing screen. This system has total flexibility and can be changed at any time by simply selecting what combination of cameras you require, you can choose to view and control 1, 10, 20, 100, 200 cameras or more simultaneously.

Benefits:

In today's changing world businesses are wanting to monitor there operations more closely for a number of reasons including, time and motion studies, OH&S, staffing issues and security. By being able to view multiple sites simultaneously businesses can take an overall look at their operations and compare what works at different site and what dosent, allowing them to streamline their operations for maximum effectiveness. OH&S problems and staffing issues can be recognised and rectified and one person can maintain effective security surveillance over multiple locations. The Platinum series has been designed to offer a packaged solution that suits all businesses from small single unit installations to large multi national organisations.

Providing a Total Package Business Solution

We look much further than just providing a Digital Video Recorder for your installation, Securview™ also offer a full range of high quality surveillance equipment and support services to provide you with a total packaged business solution. We understand that each installation is unique and we will work together with you to make sure that all your requirements are met. Our sales and engineering staff take great pride in putting together our custom made systems and are available for any support you may require.
